welcome

With headquarters in İzmir, Decros provides superior natural stone products and services in the construction, architecture and design industries, serving both domestic and international markets.

Decros brings a fresh and innovative approach to natural stone industry, acting as a whole concept provider to wholesalers and project owners. Our goal is to exceed the expectations of every client by offering outstanding customer service, increased flexibility, and greater value, thus offering a wider range of natural stone and improve the business of our clients. Our associates are distinguished by their functional and technical expertise combined with their hands-on experience, thereby ensuring that our clients receive the superior quality products and designs with a professional and cost-effective service.

Unlike other producers, Decros provides service as a producer but also as a design and consulting company. We take pride in ourselves that our ERP and CRM systems allow us to address each and every needs of our clients and provide them with effective production process and quality control.

We have warehouses, showrooms and offices in New Jersey, İzmir, Denizli and Afyon. By means of our multilocational establishment, we can provide services for USA and European Union countries.

Our logistic solutions and the ability of combining containers which consist of many different products, even in very small quantities from Turkey, enables us to serve as a one stop shop for all your natural stone needs.

In 2017 we added 3 new collections to our portfolio:

- 20mm porcelain pavers with unique and tailor made designs in line with our customer needs.
- CNC carved bathware collection with unique designs
- CNC shaped tableware, accesories and furniture collections.

Our number one commitment is to our customers; "We strive to bring them the highest quality material and design in the possible shortest period of time, and to transform every project to a pleasurable experience with Decros."

Sincerely,

Zekiye Bayyurt

who we are

Since 1973

Decros was established as an engineering company in 1973. Today Decros invests in many field such as construction, mining, logistics and naturelstone production. Our natural stone division established in 1995 in Istanbul. In a short period Decros became not only one of the biggest natural stone producers in Turkey but also became Turkey's pioneer producer which sets the trend of the natural stone industry in Turkey.

Our multi located facilities allow you to have a superior service quality and cost effective logistic solutions. Today we operate 2 factories (Afyon and Denizli) which we can produce all your needs, 2 showrooms (izmir and New Jersey) where we present all our natural stone products within living decros and 2 warehouses where we stock products for to your future possible orders.

your project solution partner...

our mission

Happy personnel
customers
shareholders

Even if our mission seems highly simple, our happiness definition is quite sophisticated. Happiness for us consists of not only material but also moral conditions.

We want our customers not only to earn materially but also to enjoy our cooperation. We want every deal to become a pleasant experience. We prefer one-to-one relations with our customers, to know them not as distant customer but as a person that we develop solid personal ties with.

We try to keep our personnel's faces smiling both while serving and in their personal lives. We ensure that they see their working place more than a profit oriented management as a company with principles and moral values.

We do not only provide a fair income for our shareholders' investments but also try to create a company they will be proud to be a part of by acting with moral principals considering moral values and environmental consciousness.

Our greatest mission is to see the smiling faces of our customers, personnel and shareholders at the end of the day.

social and environmental responsibility

5% of Decros's profit goes to social and environmental projects

Decros is a member of Tema and Foundation for Promotion of Modern Life. It regards environmental protection during production process and taking all precautions necessary for leaving a better nature to future generations as its responsibility.

Decros afforest every production field harmed involuntarily during production process, in order to gain back the wild life. And also it helps environmental protection by planting a tree for each container it sells.

Forests are world's inheritance. They do not belong to any man or government but to the earth. Everything begins with baby steps. One by one, the trees we planted is becoming Decros Forest.

Without demanding anything from others, let us take together the baby steps for promoting social and environmental lives which will lead us to big march.

Educational Inequality

Educational inequality is one of the greatest international threats as the biggest social injustice. We are trying to add in a bigger social solution by supplying 10 children's educational costs every year.

For Healthier and Safer Work Conditions

Decros takes all precautions for worker health and safety both in its own production areas and in cooperating subcontractors and supervises the subject companies. Decros does not approve retrenchments from workers' social rights and does not work with companies adopting that attitude.

Discrimination

Decros as a company does not adopt any religious, ethnical or political view. It stands at the same distance to all religions, races, sexes and does never perform any type of discrimination.

glossary

Basalt: Basalt is a common extrusive volcanic rock. It is usually grey to black and fine-grained due to rapid cooling of lava at the surface of a planet.

Bevelled edge: Bevelled edge stone has an angular and uniform chamfer all around the edge. This gives the stone a more defined look and is perfect for flooring.

Brushed: A worn-down leather look obtained by brushing the stone with a coarse rotary-type wire brush.

Bull nose edge: Convex rounding of a stone member, such as a stair tread.

Bush hammered: A mechanical process which produces a rough, pockmarked texture that resembles naturally weathered rock. Textures vary from subtle to rough.

Chisselled edge: A process of mechanically chipping the tile edge, thus giving the stone a rustic, aged appearance.

Cross cut: The process of cutting the initial block of stone parallel to the natural bedding plane. The effect is a mottled or cloud like appearance.

Filled: Filling stone is a process applied predominantly to travertine. This is when the small holes on the surface of the material are filled with a similar coloured resin or cement.

Hand bevelled: The square edge profile is softened by a sandpaper. Suitable for soft stones like limestones.

Honed: A honed surface provides a flat, matte or satin finish creating a more informal and softer look. This finish is created by stopping short of the last stage of polishing. A honed finish shows fewer scratches, and requires very little maintenance.

Limestone: Limestone is a sedimentary rock composed largely of the mineral calcite. In some cases the calcium carbonate may have been directly precipitated from the sea-water, but much more commonly it is formed from the shells of sea creatures. These shells may be whole or broken into fine particles. It is not uncommon for water percolating through limestone to cause the calcium carbonate to recrystallise and form limestone which is very hard and in which the finer shell material has been destroyed.

Marble: Marble is a metamorphic rock resulting from regional or, rarely, contact metamorphism of sedimentary carbonate rocks (either limestone or dolomite rock) or metamorphism of older marble. The temperatures and pressures necessary to form marble usually destroy any fossils and sedimentary textures present in the original rock. Marble is a very dense stone that readily lends itself to a polished finish.

Pillowed edge: A pillowed edge gives the stone a smooth standardised curve around the perimeter of the stone.

Polished: The finest and smoothest finish available in stone, generally only possible on hard, dense materials. Or, a glossy finish which brings out the full color and character of the stone.

Sandblasted: Coarse plane surface produced by blasting with an abrasive; coarseness varies with type of preparatory finish and grain structure of the stone.

Slate: Slate is a fine-grained, foliated, homogeneous metamorphic rock derived from an original shale-type sedimentary rock composed of clay or volcanic ash through low grade regional metamorphism. Slate is frequently grey in colour especially when seen en masse covering roofs. However, slate occurs in a variety of colours even from a single locality. Slate tiles are often used for interior and exterior flooring, stairs, walkways, and wall cladding. Tiles are installed and set on mortar and grouted along the edges.

Split face: Stone on which the face has been broken to an approximate plane and gives you a rough texture. This finish is typically achieved by hand cutting.

Straight edge: A polished straight 90-degree edge creates a more modern and clean look.

Travertine: Dense, banded rock composed of calcium carbonate, CaCO₃. Formed by rapid chemical precipitation of calcium carbonate from solution in surface and ground waters, it is a variety of limestone that has a light colour and takes a good polish. It is often used for walls and interior decorations in public buildings and as a paving stone.

Tumbled: A form of an antique stone delivers slightly pitted surface, and broken, rounded edges and corners, simulating natural wear over time. There are several methods used to achieve the tumbled look. Marble and travertine are primary candidates for a tumbled finish.

Vein cut: A cut into quarried stone perpendicular to the natural bedding plane.

Wavy edge: A wavy edge gives the stone a smooth and randomly undulating edge that is ideal for flooring.
